

Boris Nikolic

Software Engineer · Backend & Distributed Systems

Belgrade, Serbia | borisnikolic2302@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

Software engineer with 3+ years building production-grade backend systems, distributed architectures, and full-stack applications for enterprise clients. Specialized in Go, Python, and TypeScript, with deep experience in PostgreSQL and event-driven architecture. Uses modern AI tooling (Claude) as a core part of the engineering loop, from design to code review and refactoring, not just code completion.

TECHNICAL SKILLS

Languages	Go, Python, TypeScript, JavaScript, Java, PHP, SQL
Backend	Node.js, NestJS, Odoo, REST, Microservices
Data & Infra	PostgreSQL, MongoDB, Redis, RabbitMQ, Docker, CI/CD
Architecture	Distributed Systems, API Gateway, Clean Architecture, CDC, Event-Driven Design
AI Engineering	Claude, Kimi, ChatGPT, Local LLMs, Prompt Engineering
Frontend	React, Next.js 14, TypeScript

EXPERIENCE

Software Engineer (Contractor) · AMT Group

2025 - Present

Production systems for EU clients (Fairphone) in the sustainability and supply chain domains.

- ▶ Built GHG emissions tracking and reporting system for Fairphone's supply chain: implemented CO2e calculations via emission factors and optimized complex PostgreSQL queries over large datasets.
- ▶ Implemented FairMaterials procurement platform with automated workflow logic, material coverage tracking, and period-based reporting across supply chain data.
- ▶ Designed and built a multi-client CDC engine replicating Odoo ERP data to OLAP warehouses: per-client cursor isolation, 3-stage acknowledgment protocol, and coordinated garbage collection using PostgreSQL triggers for hard-delete capture.
- ▶ Architected a client-facing web shop integrating API Gateway, Odoo backend, and frontend services across multiple service boundaries.
- ▶ Claude for AI-assisted development: design, code review, and refactoring using prompt engineering techniques and iterative AI review cycles to cut implementation time by 10x.

SELECTED PROJECTS

Multi-Client CDC Engine

Python · Odoo · PostgreSQL

Change Data Capture engine replicating Odoo ERP data to downstream OLAP warehouses. Agent + Control Plane architecture with PostgreSQL AFTER DELETE triggers, independent per-client cursors, 3-stage Request-Fetch-ACK fault tolerance, and coordinated garbage collection.

Toy Store · Full-Stack E-commerce

Go · Next.js 14 · PostgreSQL · Redis · Stripe

Full-stack e-commerce platform with dual-token JWT authentication, shopping cart, Stripe payment integration, order management, and admin analytics. Catalog cached via Redis cache-aside strategy for sub-100ms response times.

Control Management System Platform

Go · Next.js · React · TypeScript · PostgreSQL

Multi-role CMS web application featuring authentication, order management, revenue reporting, and a real-time notification system with role-based access control.

Sales Report System

NestJS · TypeScript · MongoDB · RabbitMQ

Backend analytics service with invoice CRUD, scheduled daily report generation, RabbitMQ queue processing, and email notifications, built on a hybrid microservice architecture.

EDUCATION

Bachelor of Software Engineering

In Progress · 4th Year
