SUMMARY

Python/Odoo developer at Fairphone since 2025, building Odoo 16 modules in Python and PostgreSQL for carbon accounting and critical-material traceability; building for the web since 2022. I own features end to end, from stakeholder requirements to deployment, and also write Go and Rust services and take care of the DevOps side with security in mind: deploying and managing services, hardened Linux servers, Docker, CI/CD pipelines, and monitoring.

EXPERIENCE

Software Developer (B2B contract) · Fairphone 2025 – Present

Contracted via KIBNET, Belgrade · Python · Odoo 16 · PostgreSQL · OWL · GitLab. Responsible for the EU-side sustainability modules, both in production.

- FairMaterials, designed and built from scratch (live since August 2026): turns received purchase lines into grams of gold, cobalt, tin and tungsten through time-versioned product recipes, splits them across fair-sourcing programs with largest-remainder rounding at 1 µg, and posts them to a signed material ledger.
- GHG carbon accounting: backported Odoo's ESG module from v19 to v16 and built finance and supply collectors that turn journal items and received purchase lines into kgCO_2e across GHG Protocol scopes 1–3, using rule-matched emission factors and per-period currency rates.
- Resumable background jobs: chunked rebuilds under PostgreSQL advisory locks, an atomic UPDATE … RETURNING job claim and idempotent replays; new rows are swapped in one step, so a failed run never leaves a period empty.
- Reporting: OWL dashboards on JSON routes backed by materialized SQL views refreshed in dependency order; FairMaterials dashboard load cut from 2.8 s to 0.55 s.
- CDC API (prototype): external systems such as data warehouses read Odoo changes in cursor-based batches, acknowledged in order so no change is skipped.
- Full cycle with stakeholders: requirements, plain-language trade-offs, GitLab merge-request review, deployment to production.

Independent Full-Stack Developer · Self-directed · Belgrade 2024

- Moved from frontend into backend: built NestJS servers and REST APIs with auth and PostgreSQL, plus the React frontends consuming them.

Frontend Developer (part-time) · High school partner company · Zaječar 2023

- Contributed to a production React codebase: built UI components and styling to spec.
- Prepared request data for backend APIs and handled responses and state on the frontend.

Web Development Intern (school programme) · Local team, Zaječar · Alongside school 2022

- Built and styled websites in HTML, CSS, and JavaScript.

PROJECTS

E-commerce store with crypto payments Self-hosted on Forgejo

Rust, Forgejo, CI/CD

- Deployed to my own server through a CI/CD pipeline on self-hosted Forgejo.

SnapSyncAi: AI image-editing SaaS

Next.js 14, TypeScript, MongoDB, Cloudinary AI, Clerk, Stripe

- Photo restore, generative fill, object removal and recolor by text prompt, and background removal through Cloudinary's AI transformations; Clerk auth with webhooks syncing users to MongoDB; Stripe-paid credit packages.

E-commerce platform (university project) github.com/bok1c4/toy_store

Go, Gin, Next.js, PostgreSQL, Redis, Stripe, Nginx, Docker Compose

- Go (Gin) API gateway in front of an external product API: the browser never calls it directly; caching, error fallbacks, and dual-token JWT auth with revocable refresh tokens sit in one place.
- Two-step Stripe PaymentIntent checkout, order line-item snapshots, and an admin dashboard.
- Cache-aside Redis catalog that degrades gracefully; Nginx reverse proxy with rate limiting; Docker Compose.

Insightify: website analysis tool github.com/bok1c4/website-scraper

Go, chi, chromedp, OpenAI API, OpenAI GPT-4o, Redis, WebSockets, Next.js

- Go (chi) service scrapes a submitted site with chromedp and passes the content to OpenAI's GPT-4o (first direct API calls, later the Assistants API) for an analysis of design, content, and UX; Next.js frontend.

SKILLS

- **Languages:** Python, Go, TypeScript/JavaScript, SQL, C/C++, Rust; working knowledge of Java (Spring Boot), PHP (Laravel)
- **Backend:** Odoo module development, Go (Gin, chi), NestJS (Node.js, Express), REST API design, JWT auth & RBAC, Stripe
- **Data:** PostgreSQL (materialized views, partial indexes, advisory locks, PL/pgSQL), Redis, MongoDB, Change data capture, Query optimization, RabbitMQ, Scheduled jobs
- **Frontend:** React, Next.js, Angular, Tailwind CSS, Redux Toolkit, Odoo OWL
- **Ops:** Linux, Docker/Compose, Nginx, GitHub Actions, GitLab CI, Forgejo Actions, Prometheus, Grafana
- **Generative AI:** OpenAI API (GPT-4o, Assistants), Cloudinary AI, prompt engineering; daily agentic coding with Claude Code and Codex

EDUCATION & LANGUAGES

BSc Software Engineering · Singidunum University, Belgrade · Expected 2027

English: fluent, all work communication in English · Serbian: native
