

Boris Nikolic

Software Developer · backend-focused full-stack
Belgrade, Serbia · borisnikolic2302@gmail.com · github.com/bok1c4 · linkedin.com/in/boris-nikolic-a44a2126a · bok1c4.com

SUMMARY

Software developer building platforms and shipping software with AI as a daily pair, every change reviewed and owned. Four years of professional experience: the first year frontend only, then backend servers alongside the frontend work, now the full stack, backend first. Odoo modules and data systems on PostgreSQL, Go and Python services, React, Angular, and Next.js frontends, MVC frameworks (Laravel, Django, Spring Boot) on client and university work, and systems and networking code in C and C++. Finishing a BSc in Software Engineering (2023 – 2027). Runs a self-hosted home lab, operated like production.

EXPERIENCE

Software Developer, Fairphone (contract) 2025 – Present

- Data-heavy ERP engineering for supply-chain and sustainability operations.
- Built Odoo modules (Python, PostgreSQL) for sustainability and procurement operations, replacing manual, hand-kept tracking with automated workflows and reporting over large datasets.
 - Designed and built the replication of ERP data into analytical warehouses, with reliable delivery as the core requirement.
 - Designed the architecture of a customer-facing web shop on top of Odoo: an API gateway in front of the ERP and separate frontend services.
 - Worked directly with stakeholders: gathered requirements from the people doing the work, explained technical trade-offs in plain language, and shipped modules and features end to end, tested and tailored to the production VPS.

Client-owned, licensed software; details limited by agreement.
Over 50 personal and client projects since school; most are private or under agreements not to discuss them.

PROJECTS

Toy Store, full-stack e-commerce

Go, Gin, Next.js 14, PostgreSQL 16, Redis 7, Nginx, Stripe, Docker Compose
Dual-token JWT auth with revocable refresh tokens, two-step PaymentIntent checkout, order management with line-item snapshots, an admin dashboard, and a cache-aside catalog with graceful degradation. github.com/bok1c4/toy_store

RPG campaign manager (university coursework)

Java 21, Spring Boot 3.4, Spring Security (JWT), PostgreSQL 16, React 18, Docker Compose
Final project for the Internet Software Architecture course: a REST API with access and refresh tokens, role-based authorization, and CRUD for campaigns, characters, sessions, and items, behind a single-page frontend. github.com/bok1c4/rpg-campaign-manager

Control Management System Platform

Go, Next.js, React, TypeScript, PostgreSQL
Multi-role CMS web application with authentication, order management, revenue reporting, a notification system, and role-based access control.

Systems and networking in C/C++

C, C++20, POSIX sockets, PostgreSQL, GPG, AES-256-GCM, CMake
A multi-hop HTTP forward proxy with layered encryption in progress, a multi-client HTTP server written from the socket up, and a terminal password manager with hybrid per-secret encryption. github.com/bok1c4/HTTP-Proxy

Home lab

Ubuntu, Qubes OS, Whonix, Tor, I2P, Forgejo, iptables, SSH, Grafana, Prometheus
Self-hosted servers and VMs run like production: a private git forge, custom firewalling, hardening automated end to end, full monitoring, privacy VMs, chats and servers for anonymous communication over onion and garlic routing, and penetration testing with red and blue team practice against the lab.

SKILLS

- Languages:** Go, Python, TypeScript, C/C++, Rust, SQL; also JavaScript, PHP, Java, C#
- Backend and APIs:** Odoo module development, Go (Gin, chi), NestJS / Node.js, Express, REST API design, JWT auth and RBAC; also Laravel, Django, Spring Boot, Stripe integration, API gateway pattern
- Data and storage:** PostgreSQL, ERP data replication, Redis, Query optimization; also MongoDB, SQLite, Analytical warehouses, Prisma, TypeORM, Mongoose, Spring Data JPA
- Messaging and workflows:** RabbitMQ, Event-driven design, Scheduled jobs, Reliable delivery
- Frontend:** React, Next.js (SSR), Angular, Tailwind CSS; also React Router, Redux Toolkit, Vite, Zustand, Zod, Axios
- Infrastructure and operations:** Linux, Ubuntu servers, Bash scripting, Docker and Docker Compose, Nginx, Grafana, Prometheus; also GitHub Actions, GitLab CI, Forgejo (self-hosted), Vercel, Makefiles
- Security and networking:** Penetration testing, iptables firewalls, SSH hardening (automated), Socket programming (C/C++), Nmap, Kali Linux; also Red and blue team practice, Qubes OS, Whonix, Tor and onion services, I2P (garlic routing), HTTP servers and proxies from scratch, PGP handling, Data encryption (AES-256-GCM, GPG)
- Architecture and practices:** Distributed systems, Domain modeling, Layered (clean) architecture, MVC (Laravel, Spring MVC, Django), Caching strategies, Fault-tolerant data pipelines; also Automated tests (Jest)
- AI-assisted workflow:** Claude Code, Codex, CLAUDE.md and role prompts, superpowers plugin, engineering plugin, MCP servers; also qodo-standards plugin, Local LLMs
- Tools:** Neovim (LazyVim), tmux, lazygit, Git; also Lua (Neovim config)

EDUCATION

Bachelor of Software Engineering · Enrolled 2023, finishing by the end of 2027
